

“Continuing Education: Cultural and Linguistic Competency”

CALIFORNIA ASSEMBLY BILL 1195 & ACCME’S EA 3.2

With the passage of CA Assembly Bill 1195, continuing medical education courses with patient care components are required to include curriculum in the subjects of cultural and linguistic competency. It is the intent of the bill, which went into effect on July 1, 2006, to encourage physicians, CME providers in the state of California, and the Accreditation Council for Continuing Medical Education to meet the cultural and linguistic concerns of a diverse patient population through appropriate professional development. The planners, speakers, and authors of this CME activity have been encouraged to address issues relevant to their topic area. In addition, a variety of resources addressing cultural and linguistic competency are included in this handout.

DEFINITIONS

“Cultural competency” is defined as a set of integrated attitudes, knowledge, and skills that enables a health care professional or organization to care effectively for patients from diverse cultures, groups, and communities. At a minimum, cultural competency is recommended to include the following:

- Applying linguistic skills to communicate effectively with the target population.
- Utilizing cultural information to establish therapeutic relationships.
- Eliciting and incorporating pertinent cultural data in diagnosis and treatment.
- Understanding and applying cultural and ethnic data to the process of clinical care.

“Linguistic competency” is defined as the ability of a physician or surgeon to provide patients who do not speak English or who have limited ability to speak English, direct communication in the patient’s primary language.
